Alessandro Mattiussi graduated (2008) in Industrial Engineering at the University of Udine (Italy) and started the Ph.D. program in the 'Energy Technologies' Department of the same University (2009). His main area of research concerns 'Decision Support Systems (DSS) for Industrial Auxiliary Processes', while his current fields of research are Multi-Criteria Analysis in Energy Planning, Life Cycle Assessments (LCA) on energy-converting technologies, energy recovery in industrial contexts and territorial analyses for energy planning optimization.
