

CV

Maria Jose Verdecho (Industrial Engineer, Management Engineer, M.Sc. in Production, Logistics and Supply Chain Advanced Engineering and M.Eng in Integrated Manufacturing) is a lecturer in Operations Management and Operations Research at the Polytechnic University of Valencia. She has professional experience on service and manufacturing companies, especially on the textile and automotive industry. She is a member of CIGIP (Research Centre on Production Management and Engineering) and has participated in several research projects about supply chain management, operations management, performance measurement systems and enterprise interoperability at the European and national level. Her research interests include performance measurement systems, operations management, supply chain management and business process modelling. She has published several papers in books, journals and international conferences in these fields.
